Connections: The connection of the dishwasher to all services (e.g. electrical, water, drain, exhaust) must comply with all national and local codes of practice and must be carried out by qualified people.
Attention: If the dishwasher has a frequency inverter included and is connected after a RCD (FI PROTECTIVE SWITCH), this must be AC/DC sensitive type B.
Exhaust: A frost-protection flap is recommended if the exhaust air from the machine is ducted directly outside. If an exhaust hood is installed on top of the dishwasher, an airgap of min. 150mm needs to be maintained.

Ventilation: The ventilation and exhaust for the room must be according VDI 2052. Radiated heat emissions should be considered.

**Dimensions:** Dimensions in the drawing are finished dimensions in Millimeters. **Transport:** Minimum measurements of entry doors = outer largest dimension of machine height + 300mm; machine width + 400mm!

**Shut-off valves:** The isolating valves for rinse water, tank filling or demi-rinse are to be supplied by others. **Wash result:** A streak free result is achievable with low mineral concentration of the rinse water only (see caption "water/conductivity). If necessary a de-mineralization system should be installed. **Floor drain:** Splash floor drains should be installed for machine cleaning and for general cleaning purpose.
